**AGRO INDUSTRIAL**  
**EQUIPMENT**

**PERIPHERALS**

**Peripherals:** Automatismes adaptable to any installation. Their main function is to ease the work of the installation's central body as much as possible.

---

## MODELS

- **Product delivery belt**

Bulk product conveyor belt.

This belt delivers the product at high speed through an undulated profile belt to buffer the fall and damage the product as little as possible.

- **Pallet dispenser**

Mechanism at the entrance of the palletiser whose mission is to store a stack of pallets and dispense them one by one over the roller track or chain conveyor.

- **Bag and box centraliser**

Mechanism that has a pneumatic system to centre bags or boxes.

This element can be adapted to any belt or chassis width.

The I\_N\_T\_E\_C mission is to design and manufacture the type of machinery that the agro-industrial sector requires.

A closer relationship between client and supplier has been the basic reason for carrying out this project, which consists of providing the sector with:

- the use of latest generation technology
- creation of customised projects, although it means modifying standard machines
- direct dealings with the technical department
- prices within the sector's reach
- near and professional technical service personal
- treating the product to be palletised with the utmost care
- great quality finishes.

- **Belt lifting system**

Manual lift system for conveyor belts offering a wide range of heights and different tilts to adjust to delivery variations. This system also includes a completely motorized model offering solutions through programming.

- **Grouping belts set**

The main function of this set is to group bags or boxes together for their posterior correct handling. With this system we offer the possibility of working at different speeds to homogenise the product.

- **Tipper set**

This system is designed to be incorporated into the start of the line to carry out the corresponding bag flips; all of these systems have a completely automatic or semi-automatic lifting version.

- **Roller track**

This peripheral is designed to transport pallets. It has 89mm diameter rollers and different widths as required. This system has a motorised roller version and another with free rollers.
